Sprint 2

What did you want to do? – We want to find the demographics of three main PC uses: Gaming, Productivity and a mixer of both like streamers. We will be using methods like the ones mentioned below:

1. Steam hardware survey, details hardware gamers use and can be narrowed down from there
2. Read articles on people who mainly use their PCs for productivity and look for similarities there
3. Reading articles that tell how many **cores** is useful and required for what and comparing with Steam game requirements/recommended specs and software requirements/recommended specs
4. Some less credible but very impactful methods to be presented.

What did you achieve? – topic chosen and flushed out with a general direction of where we will be going.

What did you not do? – Last review we did not even have an idea of what we would be researching. This time we have a topic and a good idea of how we will obtain our research and data.

What are you proud of? – We are proud of having significantly more progress this time around compared to the last sprint review.

Questions?

What will you change? – meet up outside of class more to do research together and start putting together an outline for the final essay assignment
