

Third Sprint Review

DAT O

Last Sprint

- ▶ Solidified topic over cancer treatment, with Immunotherapy as the forefront
- ▶ Was able to read and understand the data and trends on my topic
- ▶ Able to access multiple databases for my data model.

The screenshot displays the NCDB Public Benchmark Reports website. At the top, the American College of Surgeons logo and tagline "Inspiring Quality: Highest Standards, Better Outcomes" are on the left, and the NCDB Benchmark Reports logo is on the right. Below this is a red banner with the text "NCDB Public Benchmark Reports. Cases Diagnosed 2010 - 2019." The main form area has a purple header with "Dx. Year" and a row of checkboxes for years 2010 through 2019, all of which are checked. Below the year selection is a "Site" dropdown menu set to "Colon". Underneath is a "Case Type" dropdown menu set to "All Diagnosis Types". The "Analysis Variables" section has three dropdown menus: "Var. 1" set to "Age Group", "Var. 2" set to "Systemic Therapy", and "Var. 3" set to "Radiation Therapy". The "Hospital Cohort Selection" section at the bottom has a "Hosp. Type" dropdown set to "All Types" and a "Geo:" dropdown set to "All States".

What was accomplished from then to now

- ▶ A half page introduction on my paper (not abstract)
- ▶ Complete Access to NCDB and SEER Stat Research Database
- ▶ Signavio Training
- ▶ Not much more concrete research since last sprint review

SIGNAVIO

Version 15.8.0 

What I wanted to achieve last sprint vs now

The biggest thing I wanted to achieve in the last sprint review was:

- Start on the final paper.
- To create at least one model.
- Use in-person research(Dr. Irosha).

Currently:

- I was **able** to at least start on the final essay.
- I was **not able** to create a model since then
- nor** talk to those working with Dr. Irosha

For the final

- ▶ Obviously finish the paper
- ▶ To create a few models using the database and its categorical data to help structure the therapy process
- ▶ Have peers proof-read and review my final paper
- ▶ Have a 2-3 page literature review completed at the end
