Second Sprint Review

By Malcolm Howard

Objective of Sprint Review

- Narrow down my topic

- Explain how I will get the results of my topic

- Identify what methods i will use

Explanation of first sprint review

My first sprint review, I talked about how I wanted to see how technology affects the game of football throughout the years whether it is good or bad. I wanted to know how it affected every aspect of the game.

Topic narrowed

I narrowed my topic from the entire aspect of football like the head of organizations and fans to just the players because doing all parts of football is too broad and too much information to research.

Methods and How

I will do the methods of my topic is by doing a before and after of the chart of when artificial intelligence is applied to certain categories. I will also do a line graph of how the numbers either increased or decreased throughout the years. For example, I will do a before and after of how many players are listed as injured during a season based on when the advancement of technology was placed and I will do a line graph on the increase/decrease of certain players' production on the field.

What I missed

I feel like I do not have every category I want to collect data on. I just have a broad idea of just doing the players and how has technology been helping them.

Next Sprint Review

I will display the results of data I collected from the categories I chosen.
